Press release

F5 single-lever mixer now with integrated thermostatic cartridge

The optimized F5L-Therm thermostatic single-lever mixers offer an integrated full scald protection with a convincing design and reliable comfort.

A new, integrated thermostatic cartridge immediately perfects the popular F5 single-lever mixer from KWC Professional. In addition to their impressive design and reliable comfort, the optimized F5L-Therm thermostatic single-lever mixers offer an additional advantage. Product advantages that bring the taps into demanding sanitary facility equipment in the public and semi public sector.

Thanks to "THERM inside", users can trigger the flow of water with the control lever, and also select their desired temperature with scald protection. The single-lever thermostatic cartridge keeps the set outlet temperature constantly above the entire temperature setting range, irrespective of the pressure and load changes in the pipe system. In addition to a turn-proof temperature stop, which cannot be accessed single-handedly by the user, guarantees safe washing and showering comfort for the user. Of course, the F5L-Therm wall-mounted mixers for washing and showering also come with scald-protected safe-touch housing.

Thanks to the pre-assembled or optional hygiene units, the F5L-Therm single-lever mixers provide additional hygiene options, such as automatic and individually adjustable water hygiene flushing and the start of thermal disinfection programs for ensuring drinking water hygiene. A bidirectional remote control is optionally available for setting the respective function parameters, such as flushing time and flushing interval, and for exporting the statistics data. The operating parameters that are saved accordingly are available to the operator to monitor and manage the drinking water installation system and to ensure transparency when it comes to hygiene measures.

KWC Group Ltd.

KWC Group Ltd. is an international premium manufacturer of taps and comprehensive sanitary solutions.
